

# Medical Microneedling Consent

## ACS-Pen

### Skincare Correctives

Client Full Name: \_\_\_\_\_

Address: \_\_\_\_\_

Phone: \_\_\_\_\_ E-Mail: \_\_\_\_\_

I am requesting collagen induction treatment of the skin for fine wrinkles, acne scarring or skin changes associated with actinic damage or aging, and voluntarily by consent authorize this procedure. The preferred areas to be treated are:

\_\_\_\_\_

\_\_\_\_\_ I understand that collagen induction therapy utilizes the ACS-PEN device that creates micro-needle punctures to the skin surface. As a consequence, the repair process releases numerous growth and healing factors that stimulate new collagen to be deposited under the skin surface. The repair process will actually extend over a twelve to sixteen week period after treatment. I also understand that I may require a series of CIT treatments to achieve the maximum cosmetic result. The procedure and complications have been explained to me and I have had the opportunity to have my questions answered..

\_\_\_\_\_ I have been advised that the object of the procedure I have requested is improvement in appearance, not perfection. It is possible for imperfections to persist, and that the result might not live up to my expectations or goals. I fully understand that the practice of medicine and surgery is not an exact science and that any reputable physician cannot guarantee results.

\_\_\_\_\_ I acknowledge that no written or implied verbal guarantee, warranty, or assurance has been made to me regarding the outcome of the procedure that I herein requested and authorized. I also understand the limitations of this procedure.

I understand the complications of CIT therapy to be as follows: Please initial each line.

Erythema: The skin may remain red for three to four days after CIT treatment. As the skin heals the erythema will resolve. Six hours after treatment makeup can be used to camouflage the erythema. \_\_\_\_\_

I understand that CIT can be combined with the application of serums, nutritional factors, and vitamins to stimulate optimal collagen production. \_\_\_\_\_

I understand bruising may occur as a result of treatment. \_\_\_\_\_

Hyper-pigmentation: A small number of patients may experience a hyper-pigmentation of the skin surface (especially if the skin is not protected from the sun's rays). This will resolve in several weeks and may be treated with a pigment gel cream. \_\_\_\_\_
